DÖTTLING GUARDIAN

**The Guardian: The world's first
high-security traveling case by
Döttling**

The world has become a safer place
with the world's first high-security
traveling case from the Döttling
safe manufactory in Maichingen:
the Döttling Guardian.

It offers unique protection for up
to six wristwatches, jewelry, cash,
or important documents – any place
and at any time.

Multiple components for singular security

A double-walled high-security tube – an in-house development by Döttling made of multiple components – is built into the leather.

The hard metal component is almost as hard as a diamond and destroys tools such as drills and saws attempting to breach the Guardian. The tube's polycarbonate content – a material also used for police shields – additionally makes the Guardian extremely impact-resistant. The material cannot be destroyed even with the biggest sledgehammers. At one end of the high-security tube there is a safe door that can only be opened with a three-digit code. If it is entered correctly the locking mechanism, consisting of four polished high-carbon steel locking bolts, opens.

In brief, when locked, opening the Guardian requires incredible force and a good deal of time – time that's short because the Guardian is also equipped with a GPS transmitter so it can be precisely located.

Individual to the extreme

As for the exterior of the Guardian, the same applies here as to all Döttling products: there are hardly any limits to its individuality. For instance, the grip mounts made of polished stainless steel can be engraved.

All imaginable variations of fabric or leather are also possible for the cover.

All of this ensures that the Guardian is not recognizable as a "travel safe" – yet another plus for your safety.

Goes anywhere with ease

The Döttling Guardian can be carried with either a hand grip or a shoulder strap, or, thanks to its compact construction with a length of only 14.5 inches and a diameter of 5.3 inches, can even be put in a suitcase.

And in spite of its high-tech security features, it weighs only 8.8 pounds, making it a real lightweight that you can take along anywhere with an easy mind.
